

Trump, Clinton, and the Environment

Not really sure where the candidates stand when it comes to environmental issues? Here's a handy chart comparing Trump and Clinton on environmental and energy issues.

Who Thinks Client Change is Real?

Non Destructive Testing (NDT) and Temperature Data Indicate No Insulation in the Ceiling

E3 Power was called to diagnose the reason for a very cold room in a new home. The residence was built in 2015 and obtained a HERS Rating of about 60. The owners

had always suspected that something was wrong in that part of the home because the bedroom was always 10 degrees colder than the rest of the house. The homeowners used a simple liquid thermometer to compare the temperature in that room compared to the thermostat setting. This method is accurate but not definitive proof since this device has no logging potential and likely has a large margin of error.

Our Clients Are Saying:

"We asked Andy to do an energy audit for our 34 year-old house. Andy and his team responded quickly and did a thorough audit of our house, which quickly identified several major sources of heat loss. E3 Power then prepared a plan of how to deal with each one." Kennel and Cheryl
